

## Kennametal Conformal Clad™ Screens

**Extend the life of SCR popcorn screens 5–8x longer than stainless steel.**

- **Superior Erosion Resistance**

Kennametal Conformal Clad cladding provides significantly higher erosion resistance versus stainless steel. Our cladding enables the substitution of less expensive carbon steel screens for more costly stainless steel screens.

- **Metallurgical Bond**

Much more resistant to impact than thermal spray coatings.

- **Advanced Cladding Process**

The Kennametal Conformal Clad proprietary process blends hard tungsten carbide particles and tough nickel chrome particles to create a durable, high-density cladding. Applied to components in a controlled atmosphere brazing furnace, the tungsten carbide particles metallurgically bond to the nickel chrome lattice and substrate component, preventing spalling, chipping, and peeling.

- **Proven Results**

It would take 1" of chrome carbide weld overlay or 3" of plain carbon steel to equal the erosion resistance provided by 1/16" (1,5mm) of Kennametal Conformal Clad cladding.

**Common Screen Types**

Woven Mesh

Wedge Wire and Grates

Expanded Diamond

Perforated

## Technology

Kennametal Conforma Clad™ tungsten carbide cladding provides unmatched resistance against abrasion, impact, erosion, and corrosion. Other types of protection may guard against one form of wear, but only Kennametal Conforma Clad cladding protects against multiple modes of wear — and our application creates a true metallurgical bond. Kennametal Conforma Clad screen capabilities include screens up to 4' x 12' (longer lengths may be possible), with screen openings 1/4" and larger (screen opening size may need to be adjusted to accommodate coating thickness).

## Proven Results

One coal-fired power plant installed stainless steel screens to protect its SCR equipment. In less than six months, the screens were torn apart and had to be replaced. Kennametal Conforma Clad screens were then used and after nine months, the screens showed little wear.

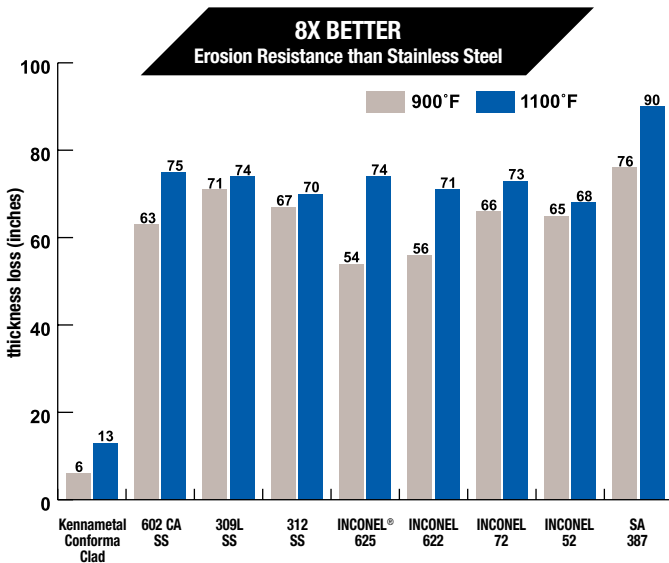

Stainless steel screens after less than six months performance.

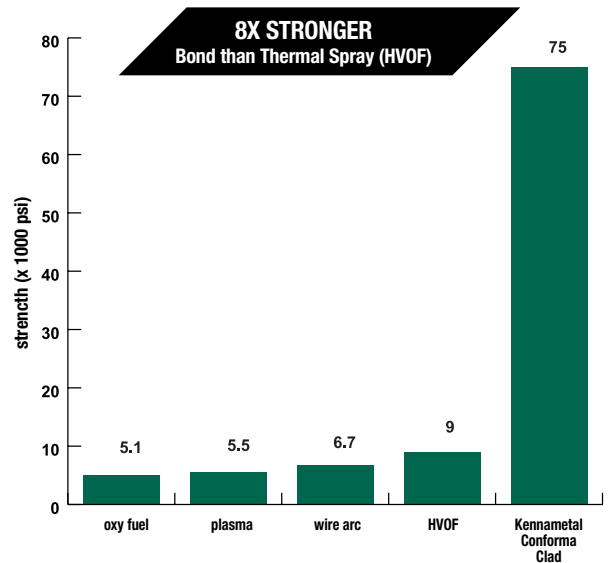

Kennametal Conforma Clad screens after nine months.
